SUMMARY

Java Full Stack Developer who has built microservices applications with Java, Spring Boot, Spring Cloud and React.js, secured with JWT and role-based access and covered by JUnit and Mockito tests. Built an AI code-generation tool with Python, FastAPI and Angular as a Software Engineer at Capgemini. AWS Certified Cloud Practitioner. B.Tech (CGPA 8.7/10).

TECHNICAL SKILLS

Languages: Java, Python, JavaScript (ES6+), TypeScript, SQL
Backend: Spring Boot, Spring Cloud (Gateway, Eureka, OpenFeign), Spring Security, JWT, Spring Data JPA, Hibernate, REST APIs, Microservices, Resilience4j, FastAPI
Frontend: React.js, Redux, Angular, RxJS, HTML5, CSS3
Databases: MySQL, MongoDB
Testing: JUnit 5, Mockito, MockMvc, Postman
AI: LLM API Integration, AI Agents, Prompt Engineering, Server-Sent Events (SSE)
Cloud and Tools: AWS (Cloud Practitioner), Git, GitHub, Stripe API (test mode), IntelliJ IDEA, VS Code
Fundamentals: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks

WORK EXPERIENCE

Software Engineer | Capgemini, India | July 2025 - September 2026

- Built **StreamAgent**, an AI-powered code-generation IDE for the CTO team: users describe a UI in plain English and get Angular, React or Vue components in a VS Code-style interface with file tree, tabs, syntax highlighting and live preview.
- Developed the Python FastAPI backend that detects the target framework, calls an LLM through an OpenAI-compatible API, parses the output into files and streams them to the browser using Server-Sent Events (SSE).
- Designed a plain-text FILE/END_FILE output format with regex parsing in place of JSON, removing failures caused by invalid or truncated JSON on large LLM outputs.
- Built the Angular 17 and TypeScript frontend with an RxJS-based SSE client, recursive file explorer, tabbed viewer and highlight.js, isolating each file's state so streamed content never mixes.
- Wrote the project guide covering architecture, API reference, setup, known issues and knowledge transfer.
- Completed Capgemini's Java full-stack training and evaluations covering Java, Spring Boot, React.js, MySQL and REST API development.

PROJECTS

Online Job Portal | Java 21, Spring Boot, Spring Cloud, MySQL, React.js

- Built a full-stack job portal on a microservices backend (auth, admin and user services) behind a Spring Cloud API Gateway with Eureka service discovery, and a React.js frontend for employers and job seekers.
- Implemented stateless JWT authentication with role-based access (employer and job seeker) and ownership checks so users can only read or change their own data.
- Connected services with OpenFeign and added Resilience4j circuit breakers with fallbacks, so registration and job search keep working when another service is down.
- Built role-based React pages for posting and managing jobs, searching, applying, saving jobs to a basket and messaging, using React Router and Axios.
- Wrote JUnit 5 and Mockito tests for the service layer and secured endpoints.

OGS Gaming Store | Java 17, Spring Boot, Spring Cloud, MySQL, React.js, Stripe

- Built an e-commerce gaming store on a microservices architecture with user, product, cart and order services, Spring Cloud Gateway and Eureka.
- Secured services with JWT and role-based access (admin and customer), with BCrypt-hashed passwords and service-to-service calls through OpenFeign.
- Integrated Stripe payments in test mode with a simulation fallback, and built an admin analytics page.
- Built the React 19 and Vite frontend for browsing products, cart, checkout and order history.
- Wrote JUnit 5 and Mockito tests using MockMvc and an H2 test database.

EDUCATION

Bachelor of Technology in Electronics and Telecommunication Engineering | 2021 - 2025
Thakur College of Engineering and Technology, Mumbai | CGPA: 8.7/10

CERTIFICATIONS

- AWS Certified Cloud Practitioner | Amazon Web Services | credly.com/badges/45a0e75e-ab14-40b2-a91e-9101a56fed06/public_url
